LLM Prompt Documentation

Project Title:

Campus SnackPass – College Canteen Food Ordering Application

AI Tool Used:

ChatGPT

Purpose of Using AI:

ChatGPT was used as a development assistant during the creation of the Campus SnackPass application. It helped in understanding React concepts, generating code suggestions, debugging errors, improving UI design, and learning deployment steps.

Prompts Used:

Prompt 1: Project Setup

Create a React Project for a college canteen food ordering application called Campus SnackPass using Vite. Suggest the folder structure and required components.

Prompt 2: Creating Components

Create React components for Navbar, FoodCard, FoodMenu, and Cart for a food ordering application.

Prompt 3: User Interface Design

Design a modern, responsive UI for a college canteen food ordering application using React and CSS.

Prompt 4: Food Menu Data

Create food item data with name, category, price, and image fields for a college canteen menu.

Prompt 5: Cart Functionality

Implement add to cart, quantity update, remove item, and total price calculation functionality using React state.

Prompt 6: Debugging Errors

Explain and fix this Vite import error: Failed to resolve import from assets folder.

Prompt 7: CSS Not Applying

i) My CSS changes are not reflecting in my React Vite application. Help me debug the issue.

ii) My food images are not resizing correctly in React CSS. Check my CSS and suggest the correct image styling.

Prompt 8: Deployment

Explain how to upload a React Vite project to GitHub and deploy it using Vercel.

Deployment Details:

i)GitHub Repository Link:

🔗 GitHub Repository

(OR)

🔗 https://github.com/harshidinesh3007-ops/Campus-Snackpass

ii)Vercel Deployment Link:

🔗 campus-snackpass.vercel.app
